DETAILED ACTION

This office action is in response to the amendment filed 06/27/05. A new ground of rejection is introduced as necessitated by amendment.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claim 8 is rejected under 35 U.S.C. 102(e) as being anticipated by Wu et al. (USP 6542026), previously cited.

As to claim 8, Wu et al.'s figure 4 shows a method of trimming a voltage comprising: receiving an input voltage (Vdd) to be trimmed; performing a constant load current and constant feedback impedance voltage trim process on the input voltage (voltage at node 400 and the resistors are constant. Thus, voltage Vref is constant. Therefore, the current going through transistor P1 and the impedance from P1 to node 415 are constant); and outputting a trimmed voltage (voltage at node 435) from the input voltage.

Allowable Subject Matter

3. Claims 1-7 and 13-20 are allowed.

4. Claims 9-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2816

Claims 1-7 and 13-20 are allowable because the prior art fails to teach or suggest a bias current circuit coupled to the voltage divider circuit and a second potential, wherein an adjustable resistive load is configurable to maintaining a substantially constant load current through the transistor.

Claims 9-12 would be allowable because the prior art fails to teach or suggest the step of selectively adjusting a load resistance wherein a substantially constant load current is maintained; selectively adjusting a divider ratio wherein a desired output voltage is generated; and maintaining a substantially constant feedback impedance for each selected load resistance.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
